

Green Powered Disclosure Label SPRING 2026

This label discloses current energy sources and air emissions for the Green Powered program. More information can be found at greenenergyconsumers.org/local-sources. You may opt out of Green Powered with no fee at any time by contacting: Green Energy Consumers Alliance at 617-397-5199 or hello@greenenergyconsumers.org.

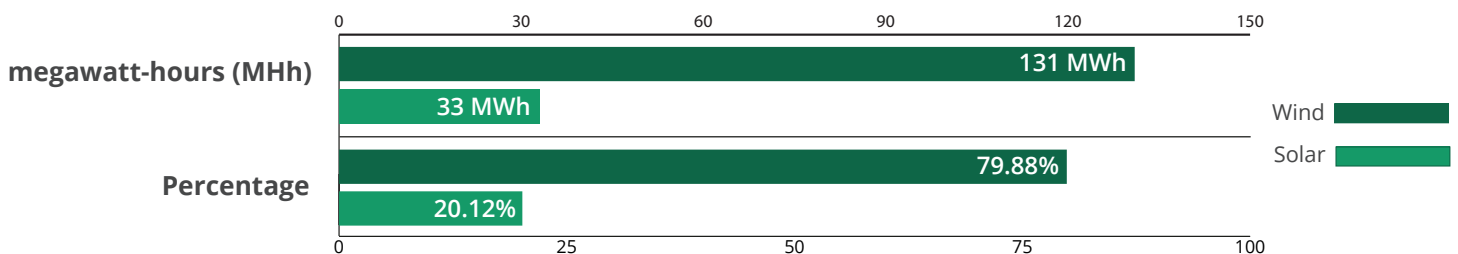

Green Powered Subscription allows you to purchase Renewable Energy Certificates for a set amount of kilowatt hours per month to help speed the transition to clean energy. It is unconnected to and has no effect on your electric supply and bill from your utility. Update your subscription anytime at GreenEnergyConsumers.org/Portal.

Pricing: \$0.054 per kWh

Your Options	
Good	\$16.20 per month for 300 kWh
Best	\$32.40 per month for 600 kWh
Custom	\$5.40 per block of 100 kWh

Terms of Service: GreenEnergyConsumers.org/GreenPoweredSubscriptionTermsService

What are Renewable Energy Certificates (RECs)?

For every megawatt hour (MWh) of electricity that a renewable energy generator puts on the grid, a REC is created to document it. RECs represent and can be sold separately from electrons, thereby creating an extra stream of funding for renewable energy projects. We purchase and retire RECs for the energy you consume so you can claim that your electricity came from renewable energy sources. RECs are retired 6 months (or more) after they are generated, which is why this disclosure label covers a period in the past.

In Massachusetts and Rhode Island, laws require that utilities and suppliers buy an increasing amount of local "Class I" or "new" renewable energy on our behalf. This creates an incentive to build renewable generators in New England, and by voluntarily choosing to buy Class I yourself, you're driving up demand.
